

PUBLIC PETITION

TELL FELTON: STOP RISKING THE HEALTH AND SAFETY OF CHILDREN, STAFF AND CLIENTS

UNITED
FELTON
WORKERS

In the 2022-2023 school year, staff reported several disturbing events across Felton's Early Care and Education sites that put the health and safety of workers and children at risk. We demand changes in the workplace to meet the health and safety needs of the Felton community and the clients they serve.

Gas Leak Causes Illness in Children and Staff

Felton management repeatedly ignored parent and staff concerns over a toxic-smelling odor in a Family Developmental Center classroom, waiting seven months before ordering an investigation and discovering a dangerous gas leak.

There were numerous reports of gas leak-related illnesses that caused absences. When the gas leak was found, Felton management kept the information hush-hush, taking zero accountability.

Felton Puts Parents, Children, and Staff in Potentially Life-Threatening Situation

When an active shooter was outside Felton's Solmar Learning Center, Felton did not communicate with parents during this frightening incident: many arrived to drop their children off and were turned away by armed police. Parents were only informed of the incident the following morning. Despite requests from staff and parents, there is still no safety protocol for active shooters in place.
